

MyBaby

Operation Instruction

Product Overview

MyBaby is a device designed for baby care. It uses Smartlink technology to set Wi-Fi within 20 seconds. You can remote-control the device to take care of your baby at anytime and anywhere. You can remote-control MyBaby to turn Pan:355°, Tilt:90°, detect the baby's room temperature and humidity, and to give your baby a comfortable sleeping condition. You can also play baby songs or stories for the baby from your phone and turn on the colorful light via your phone. High resolution photos and videos from MyBaby, make your baby happy at any time.

Record Playback

Please click [Mine]-[Record Playback] to choose the corresponding device to view the video playback.

Alarm Settings

Receive Alarm Message: Your phone can receive alarm push messages.

Motion Detection: Babycam can monitor moving objects, then set off the alarm.

PIR: Babycam can detect human body temperature then set off the alarm.

Humiture Alarm: You can set the humiture limit. When the room humiture is beyond the setting, then the alarm is activated.

Recording Settings

Manual Recording:24 hour recording continuously. Not recommended because it occupies too much TF card storage.

Alarm Recording: Set supervised alarm. When the Babycam alarm is activated it will record.

Scheduled Recording: You can set the record time.

Q&A

Network problem

Q : Why is the device offline after being added successfully?

A : Please refresh the device list. If it is still offline, please check that the Wi-Fi router is connected with Internet. If the router works normally, please restart the router. Otherwise, reset the router and reconfigure.

Q : Why does it fail on setting when you add the device?

A : Please check the router. The Babycam can only support 2.4GHz Wi-Fi. and Wi-Fi hotspot's name cannot include Chinese or special symbols. Please check the Wi-Fi password, reset the device, and try it again.

Alarm problem

Q : Why can't I receive the alarm message successfully even if I open the alarm push message?

A : Please make sure that the device is at the defense status and your mobile phone alarm push function is on.

Q : Why can I not receive alarm emails?

A : Please check your spam box.

Record problem

Q : How do I choose a record mode?

A : We suggest to use Alarm Recording mode so that the TF Card can be used efficiently and for a longer time.

Q : Why does it not record successfully?

A : Please format your SD Card via your mobile app. Or root it on a PC..

Q : Can I remotely download the video on the TF card to my phone or PC?

A : The video cannot be downloaded to your mobile phone, but you can use CMS to download the video to your computer and convert its format.

CMS problem

Q : What is CMS's user name and password?

A : User Name: admin password:00000000

Other problems

Q : Can two users login with the same account simultaneously?

A : No, each account can only be used by one person at the same time.

Q : If I forget the Babycam's password, what should I do?

A : Next to the power supply port, there is a Reset hole. Please power on the Babycam, and insert a pin tool (such as a straightened paperclip) into the Reset hole. Lightly keep pressing the inner hole for 7 seconds, until a tone is heard. The default password becomes 123456.
